

I only recently have discovered XM Satellite Radio, and found it to be a GREAT investment for my vehicle. Not only does it feature an unbelievable variety of music, but also innovative up to date news, traffic and weather channels that I can listen to anywhere at anytime, uninterrupted and without changing stations endlessly. This is particularly convenient when traveling. I am OUTRAGED regarding the NAB petition that seeks to stop XM from providing XM Instant Traffic & Weather. I pay a fixed amount each month to have XM, and as a paying customer BY RIGHT deserve to be able to listen to my music and my weather/traffic reports on MY XM WITHOUT LIMITATIONS FROM PEOPLE WHO HAVE NOTHING TO DO WITH IT. XM just only recently added the Boston area weather channel. Petition against it?? It's wrong and I am insulted that the NAB would try and deprive me of MY weather/traffic. I WOULD RATHER GO OUT OF MY WAY AND WATCH TV to get my weather/traffic reports if this is the case. It is my understanding that radio may be losing customers this way, but TECHNOLOGY WILL CONTINUE TO ADVANCE and it is only a matter of time till others witness the benefits of XM Satellite Radio and ditch the commercialized hassle of FM/AM radio. I have numerous friends who are definitely going to go out and get XM for their cars. PERHAPS if regular radio was better, it'd have a chance. But satellite radio is twice as convenient, twice as entertaining, twice as fast, and twice as reliable. The NAB can try and fight it, but it is futile. REGARDLESS, I will continue to listen to my XM more than I'll ever listen to my regular radio, so THERE.
